## Background Information

CD105 (Endoglin) is a homodimeric transmembrane glycoprotein serving in presence of TGF $\beta$ R-2 as a receptor for TGF $\beta$ -1 and TGF $\beta$ -3. CD105 is highly expressed on endothelial cells and promotes angiogenesis during wound healing, infarcts and in a wide range of tumours and its gene expression is stimulated by hypoxia. CD105 prevents apoptosis in hypoxic endothelial cells and also antagonizes the inhibitory effects of TGF $\beta$ -1 on vascular endothelial cell growth and migration. Normal cellular levels of CD105 are required for formation of new blood vessels.
